- 1) Energy consumption in kWh per year, based on 160 drying cycles of the standard cotton programme at full and partial load, and the consumption of the low-power modes. Actual energy consumption per cycle will depend on how the appliance is used.
- 2) The 'standard cotton programme' used at full and partial load is the standard drying programme to which the information in the label and the fiche relates; such programme is suitable for drying normal wet cotton laundry and it is the most efficient programme in terms of energy consumption for cotton.
