<sup>1</sup> Annual energy consumption is based on 220 standard washing cycles for cotton for cotton programmes at 60°C and 40°C at full and partial load, and the consumption of low power modes. Actual energy consumption will depend on how the appliance is used.

<sup>2</sup> Annual water consumption is based on 220 standard washing cycles for cotton programmes at 60°C and 40°C at full and partial load. Actual water consumption will depend on how the appliance is used.

<sup>3</sup> Based on the standard 60°C cotton program at full load and the 40°C cotton program at partial load.

<sup>4</sup> The standard 60°C cotton program and the standard 40°C program are the standard washing programmes to which the information in the label and the fiche relates. These programmes are suitable to clean normally soiled cotton laundry and are the most efficient programmes in terms of combined energy and water consumption.

<sup>5</sup> In case there is a power management system.

<sup>6</sup> Based on the standard 60°C cotton program at full load.
