</table>

1) Based on 220 standard washing cycles for cotton programmes at 60°C and 40°C at full and partial load, and the consumption of the low-power modes. Actual energy consumption will depend on how the appliance is used.

2) Based on 220 standard washing cycles for cotton programmes at 60°C and 40°C at full and partial load. Actual water consumption will depend on how the appliance is used.

3) Class G is the least efficiency and Class A is the most efficient.

4) Based on the standard 60°C cotton programme at full load and the standard 40°C cotton programme at partial load.

5) "Standard 60°C cotton programme" and "standard 40°C cotton programme" are standard washing programmes to which the information in the label and fiche relates. These programmes are suitable to clean normally soiled cotton laundry and they are the most efficient programmes in terms of combined energy and water consumption.

6) In case there is a power management system.

7) Based on the standard 60°C cotton programme at full load.
